Note: User may need to change numbers (e.g. **"Product #"**, **"Barcode"**) as custom type in the excel application, for it to show properly. To change data type in excel, select the column, right click, Format cells, select Custom category and choose type = 0

II. Import Sales Order Product Lines Data from CSV File:

Scenario: Import list of products data into a sales order document from csv file

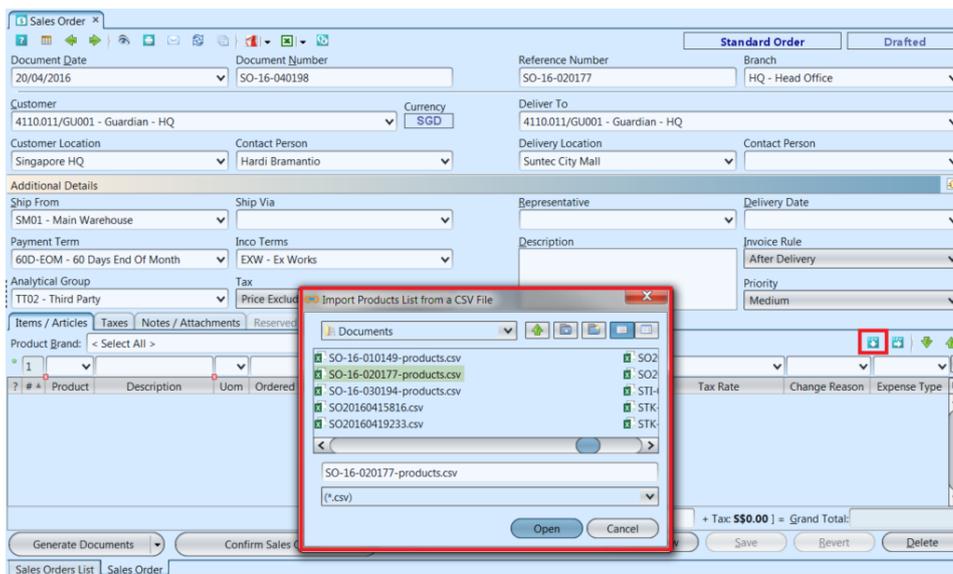

Note: User is recommended to export data first to create a data template with example to use as data import creation template. This will help reduce likelihood of mistakes in preparing the data to be

imported into GOOMI application

1. Open **“Sales – (Sell In Transactions) Sales Orders”** view

2. Double click on a sales order from the sales orders list, it will bring up the details on **“Sales Order”** tab for the selected order. User can only enter / import product lines data when the Sales Order document status is **“Drafted”**. If a sales order’s status is **“Confirmed”** or **“Approved”**, reopen / undo approval of the Sales Order first. This is to allow user to modify the document

3. On right side of **“Items / Articles”** tab, click on  button to import the list of products from csv file. It will pop up a window, select folder to load and choose the csv file to *import the data from

***Note:** User may need to change numbers (e.g. **“Product #”**, **“Barcode”**) in the csv data file as custom type in the excel application, for it to save properly as csv file. This is due to excel application changing long numbers replacing it with zeros at the back (e.g. 45315060300881becomes 45315060300000). To change data type in excel, select the column, right click, Format cells, select Custom category and choose type = 0

4. Compare the imported data in the sales order against the csv file
