Inbound

Receipt Order

The Receipt Order application allows the user to
receipt Goods in an Inbound mode into the warehouse.
The receipt order will be generated based on the
purchase invoice of the ordered goods.

Advance Shipment Notice

An advance shipment notice (ASN) is a notification of
pending deliveries, similar to a packing list. In the
advance shipment notice screen the user will have a
list of ASN. The user can also create new ASN for
known incoming shipment, and export the list of
incoming shipment to a CSV file.

Goods Receipt

The Inbound Goods receipt application shows the list
of products that is going through the receiving
process and the status at which the process is. User
can update / modify the document based on the
received goods. The received goods will then be put
away at the warehouse staging area.

Customer Returns

The Customer Returns view allows the user to view and
inquiry any returns from the customers. The user is
also allowed to drill down from any selected
transaction to the details of the returns.

Putaway

The putaway process application helps the warehouse
to be in a organised manner. The products once
received will be accounted for and stored in a
predefined location.
